ITS DOUBLE REAR WALL WITH VENTILATION SLOTS ENSURES  
OPTIMUM CIRCULATION OF AIR HUMIDITY.

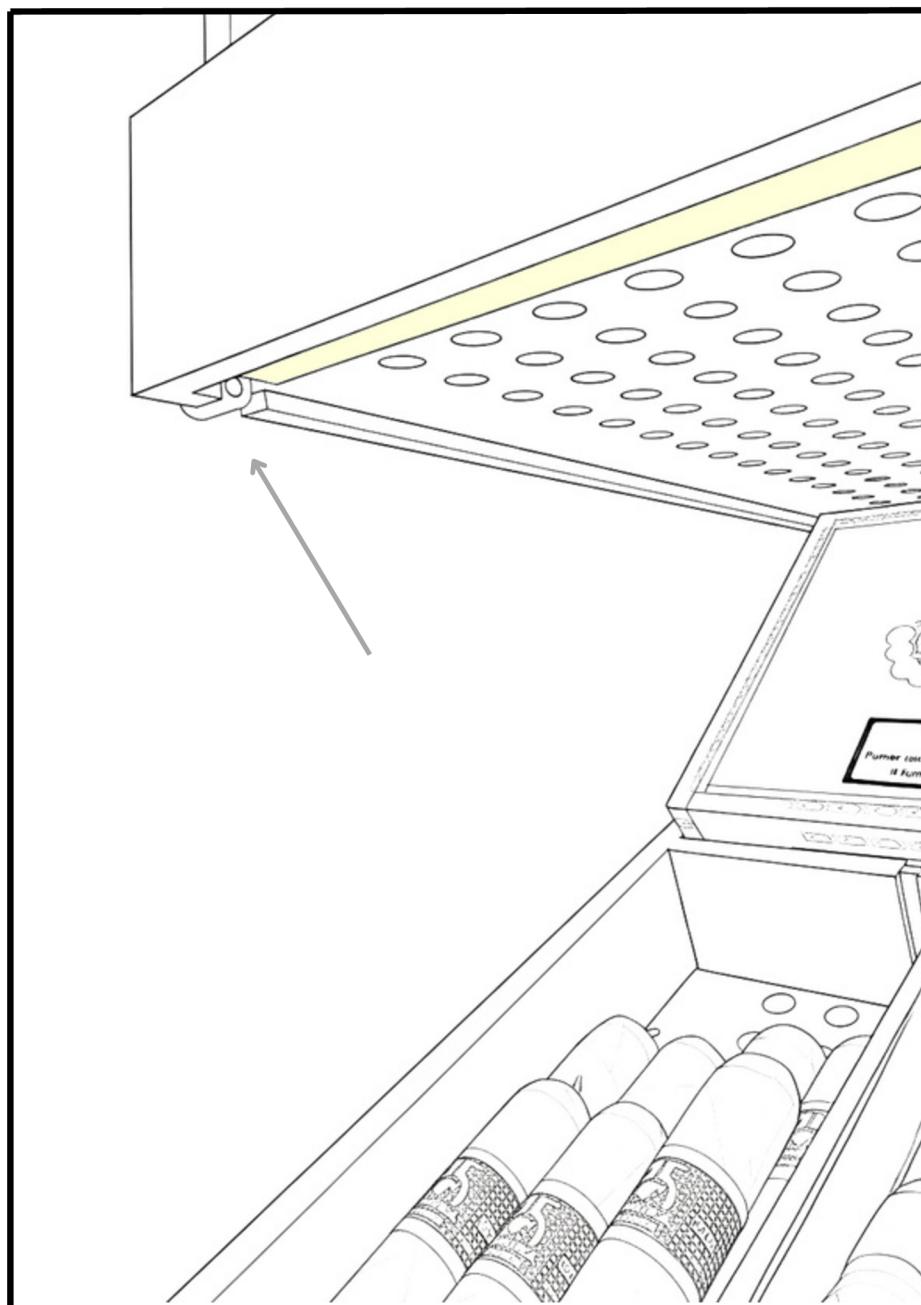

THE HUMIDIFIER DRAWS AIR INTO THE TANK AND BLOWS HUMID AIR  
INTO THE AIR FEED OPENING FOR THE REAR WALL VIA THE REAR FAN.

THE SHELVES AND TRAYS ARE EQUIPPED WITH INTEGRATED CONTACT SURFACES. WHEN THE SHELVES ARE INSERTED, THE ELECTRICAL CONNECTION IS ESTABLISHED AUTOMATICALLY, ACTIVATING AND ILLUMINATING EACH SHELF INDIVIDUALLY.

TO ENSURE RELIABLE CONTACT AND CONSISTENT ILLUMINATION, THE TRAYS MUST REST FIRMLY ON THE CONTACT SURFACES. THIS IS ACHIEVED WHEN THE TRAYS ARE FILLED, GUARANTEEING THAT THE LIGHTING FUNCTIONS PROPERLY.

THE RESULT IS A HARMONIOUS, MULTI-LEVEL LIGHTING EFFECT IN THE INTERIOR WITHOUT ANY VISIBLE CABLING.
